

Hi! //

My name is **Eric Kim**.

**& I'm running to be IUGA's
Director of Technology**

I'm an aspiring security engineer with experience in Full-stack development, IT, and Cybersecurity.

As a First Year Representative, I had the opportunity to work with the leadership team, and understand many strengths and limitations in IUGA's IT infrastructure.

Vote for me!

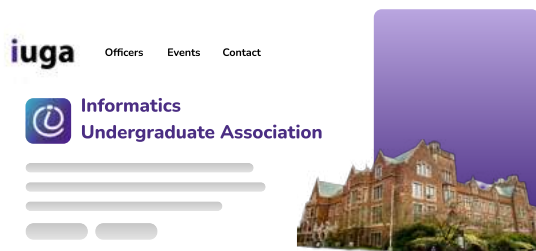

I've got many exciting plans for you
and the iSchool community 😊

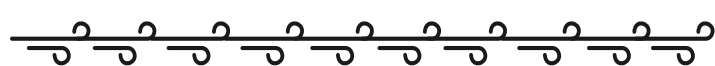

iuga IT Roadmap

1. Improve Website Utility

One of my goals as the Director of IT is to completely revamp the IUGA Website and improve its utility. With the new website, I hope to improve communication between iSchool students, faculty, and staff.

Feature Name	Description
 Events	Page for past and upcoming events
 Suggestion Box	A safe space for iSchool students to share ideas
 IT Status	Status updates on all IUGA IT resources

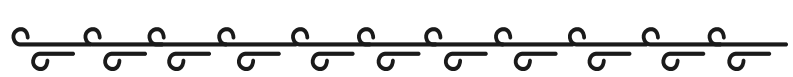

2. Improve Efficiency

Another goal of mine is to improve the efficiency of IUGA's IT infrastructure.

By building CI/CD pipelines, I will **introduce automated workflows** and **eliminate manual tasks** for IUGA's applications and IT resources.

I will also **write in-depth IT documentation** to improve processes and help new directors quickly understand the underlying IT environment.

3. Improve Security

Information security and privacy is very important to me.

Using my experience and knowledge in Cybersecurity, I will focus on maintaining **confidentiality, integrity, and availability** of this organization's data.

Thank you for making it this far 😊
